

# Comparing eBooks & Books

	<b>eBooks</b>	<b>Books</b>
<b>Legibility</b>	eBooks might use “eInk,” LCD/LED screens, or external monitors. “eText” can be resized for better legibility. Some screens are backlit and/or can display small text quite clearly.	Books usually do not suffer from the glare issues many electronic devices or computer screens can present. Books can be read comfortably in a various lighting/settings. Text size/clarity varies.
<b>Look</b>	eBook readers can look “hi-tech,” sleek and thin. Book viewing software (apps) appear in a variety of styles and can display book covers or lists of eBook titles.	Books, of course, come in all shapes and sizes, some with photos or illustrations, silky pages, or fancy covers. In a bookcase or on a shelf, books can often look rather appealing if not elegant.
<b>Feel</b>	eBook readers are made of plastic and metal whereas eBook software has no “feel” because it’s <i>in the computer</i> . eBooks weigh nothing at all because they are files.	Books, made of paper (natural or recycled), weigh differently. Some are hardcover, others soft. The texture of paper appeals to many readers. Some pages feel smooth or coarse.
<b>Speed</b>	Many eBooks can be retrieved relatively quickly (as compared to ordering books and waiting for delivery). Some eBook readers load books and turn pages slowly.	Books are ready the moment you pick them up, unlike many eReaders or computers. Real pages can be flipped / skimmed / bookmarked fast, and you can work easily with many books at once.
<b>Carrying</b>	eBook readers (or computers with eBook software) can carry dozens to hundreds of eBooks. Some students might prefer eBooks to regular textbooks (if available).	Books, being substantial, are bulky, can take up quite a bit of space and can be quite heavy to carry several at a time, especially for students carrying textbooks in backpacks or bookbags.
<b>Ease</b>	eBook readers and software (apps) can require some basic computer experience. Each eBook reader works differently and must be installed and learned. Many eBooks cannot be shared due to licensing restrictions and “Digital Rights.”	Books are “as easy as it gets” in terms of use: you just open them up and start reading! No computers necessary. Books can be shared and resold, unlike those eBooks locked in special computer files and licensing terms. Books can be browsed. Many eBooks can be searched.
<b>Cost</b>	For general consumers, many eBooks can be very cheap or expensive. Not all books exist as eBooks. eBook readers or computers may incur added expenses. Free public domain eBooks do exist.	Books <i>and</i> eBooks at the library are always free for borrowing. Bookstores can offer discounts and other benefits for buyers. The values of some books can rise in time. Many used books are available at very low prices.
<b>Durability</b>	eBook readers can break when dropped or wet. Some current eBook files might not work with future readers or software. Computer viruses can destroy files.	Books can withstand much abuse: variations in temperature, moisture, falls, tearing, and even gnawing from pets. (Just don’t try this with <i>library</i> books.) Some books last for centuries!
<b>Availability</b>	Due to copyrights and related issues, there is not <i>an eBook for every printed book</i> . Many printed books are still published <i>before</i> eBook editions exist. Laptops or eReader batteries require recharging (unless plugged in). Not all publishers produce eBook editions. Most eBooks cannot be viewed completely until bought.	Books are generally more available than eBooks, and this will be so indefinitely due to copyrights, international legalities, publishers’ decisions, and the preference or need of buyers to own certain titles in print or other formats. Most books can be perused freely in stores prior to being purchased. Books can be borrowed from libraries, shared between persons/libraries.
<b>Greenness:</b>	eBooks save paper but require power. eReader materials might not be recyclable.	Books use paper (natural or recycled) and require no power (unless a lamp is necessary).
