

# Comparing eBooks & Books

	<b>eBooks</b>	<b>Books</b>
<b>Legibility</b>	eBook readers use “eInk,” LCD screens, or computer monitors. eText can be resized to be made more legible. Some screens are back-lit and can display text quite clearly.	Books usually do not suffer from the glare issues some of the most common computer screens can present. Most books can be read in a variety of lighting settings.
<b>Look</b>	eBook readers look very “hi-tech” if not futuristic, as well as sleek and thin. On computers, eBook viewing software can resemble other computer programs.	Books come in all shapes and sizes, some with photos or illustrations, glossy pages, or fancy covers. In a bookcase or on a shelf, books can look appealing if not elegant.
<b>Feel</b>	eBook readers are made of plastic and metal whereas eBook software has no “feel” because it’s in the computer. eBooks weigh from little to nothing.	Books, made of paper (natural or recycled), weigh differently. Some are hardcover, others soft. The texture of paper appeals to many readers. Some pages feel smooth.
<b>Speed</b>	eBooks download relatively quickly (as compared to ordering books and waiting for delivery). Some eBook readers slowly load books / turn pages.	Books are ready to be read the moment you pick them up, unlike eReaders or eBook software on computers. Pages can be flipped / skimmed / bookmarked quickly.
<b>Carrying</b>	eBook readers (or laptop computers with eBook software) can carry dozens to hundreds of eBooks. Free of physical textbooks, students might prefer eBooks.	Books, being substantial, are bulky, can take up quite a bit of space and can be quite heavy to carry several at a time, especially for students carrying textbooks in backpacks or bookbags.
<b>Ease</b>	eBook readers and eBook software requires some very basic computer experience. Each eBook reader works differently and must be learned. Many eBooks cannot be shared due to licensing restrictions and “Digital Rights.”	Books are “as easy as it gets” in terms of use: you just open them up and start reading. No computers are necessary. Books can be shared and resold, unlike many eBooks locked into computer formats and licensing terms. Books can be browsed, while eBooks can be searched.
<b>Cost</b>	For general consumers, many eBooks can be very cheap (sometimes half the price or less of a regular book). eBook readers or computers still present expenses. Many free public domain eBooks do exist.	Books and eBooks at the library are always free. Bookstores offer membership discounts and other benefits for regular buyers. Values of certain books rise as they get older. Used book stores offer many books at a low cost.
<b>Durability</b>	eBook readers can malfunction if dropped or if they encounter moisture. Some of the current eBook files might be incompatible with future eBook readers or software.	Books can withstand much abuse: variations in temperature, moisture, falls, tearing, and even gnawing from pets. (Just don’t try this with <i>library</i> books.) Some books lasted for centuries.
<b>Availability</b>	Due to copyrights and related issues, there is not an eBook for every printed book. These days, printed books are usually published before eBook editions. Laptops or eReader batteries will require recharging unless plugged in. Not all publishers produce eBook editions. Most eBooks cannot be viewed completely until bought.	Books are generally more available than eBooks, and this will be so indefinitely due to copyrights, international legalities, publishers’ decisions, and the preference or need of buyers to own certain titles in print or other formats. Most books can be perused freely in stores prior to being purchased. Books can be borrowed from libraries and shared between libraries.
<b>Greenness:</b>	eBooks save paper but require constant power (batteries or outlets) to work.	Books use paper (natural or recycled) and require no power (unless a lamp is necessary).
